PROFESSIONAL SUMMARY

Results-driven Software Engineer with demonstrated expertise in building production-grade, full-stack web applications and AI-powered products from the ground up. Proficient across the modern JavaScript ecosystem—React, Next.js, Node.js, TypeScript—with hands-on experience integrating Large Language Models via the OpenAI API to deliver intelligent, user-centric features. Designs scalable RESTful backends backed by PostgreSQL and implements secure authentication flows. Combines a product-first mindset with strong engineering fundamentals to ship performant, maintainable software. Actively targets roles at high-growth technology companies including Google, Microsoft, Amazon, Meta, and Razorpay.

CORE SKILLS

Languages	JavaScript (ES2024) · TypeScript
Frontend	React.js · Next.js 14/15 · HTML5 · CSS3 · Tailwind CSS
Backend	Node.js · Express.js · REST APIs · JWT Auth · Middleware Design
Databases	PostgreSQL · MongoDB · Prisma ORM
AI / LLM	OpenAI API · Prompt Engineering · LLM Integration · AI Workflow Automation
Tooling	Git · GitHub · VS Code · Postman · Figma · Vercel

FEATURED PROJECTS

Interview-AI — AI-Powered Interview Preparation Platform

Engineered an end-to-end platform that parses job descriptions and user profiles to auto-generate personalized interview questions, ATS-optimized resumes, and tailored learning roadmaps.

- ▶ Architected a multi-step AI pipeline using OpenAI GPT to analyze JDs and synthesize context-aware question banks, reducing manual prep time by ~70%.
- ▶ Built a full-stack Next.js 15 app with TypeScript, server actions, and PostgreSQL (Prisma) for persistent user data and resume history.
- ▶ Implemented AI-driven ATS scoring that surfaces keyword gaps and rewrites bullet points for maximum recruiter visibility.

[Next.js 15](#) · [TypeScript](#) · [OpenAI API](#) · [PostgreSQL](#) · [Prisma](#)

WhiteBoard — Real-Time Collaborative Digital Canvas [🔗 white-board-umber.vercel.app](#)

Designed and shipped a production-deployed collaborative whiteboard enabling real-time multi-user brainstorming, diagramming, and teaching sessions.

- ▶ Developed an interactive canvas with freehand drawing, shapes, sticky notes, and text tools using Next.js and TypeScript.
- ▶ Optimized rendering performance for concurrent collaborators, achieving smooth 60 fps interactions on low-bandwidth connections.
- ▶ Deployed to Vercel with CI/CD pipeline; zero-downtime releases and live production traffic.

AI Code Reviewer — Automated Engineering Feedback Engine

Built an AI-powered code analysis assistant that identifies security vulnerabilities, performance bottlenecks, and readability issues across submitted code snippets.

- ▶ Leveraged OpenAI API with structured prompt engineering to deliver line-level feedback categorized by severity (critical / warning / info).
- ▶ Reduced average code-review turnaround from hours to seconds, accelerating developer iteration cycles.
- ▶ Designed a clean Next.js UI with syntax-highlighted diff views and actionable fix suggestions.

[Next.js](#) · [Node.js](#) · [OpenAI API](#) · [TypeScript](#)

Advanced Banking Ledger — Scalable Financial Backend System

Architected a production-ready backend ledger system supporting multi-account transaction processing, auditability, and financial record consistency.

- ▶ Implemented ACID-compliant transaction workflows using PostgreSQL with Prisma, ensuring zero data loss across concurrent operations.
- ▶ Built role-based JWT authentication and authorization middleware securing all financial API endpoints.
- ▶ Designed a RESTful API layer with Express.js exposing account management, transfers, and audit-log endpoints—structured for horizontal scalability.

[Node.js](#) · [Express.js](#) · [PostgreSQL](#) · [Prisma](#) · [JWT](#)

Edu Hub — AI-Powered Student Productivity Assistant

Created an intelligent educational dashboard enabling students to manage assignments, track learning milestones, and receive AI-generated study recommendations.

- ▶ Integrated OpenAI API to generate personalized study plans based on subject difficulty, deadline proximity, and historical performance.
- ▶ Designed a PostgreSQL schema with complex relational models (students, subjects, tasks, progress) and optimized query performance with indexed lookups.
- ▶ Achieved measurable improvement in task-completion tracking through an intuitive, responsive Next.js interface.

ENGINEERING HIGHLIGHTS

- ▶ Built 5+ full-stack applications from concept to production deployment—spanning frontend, backend, database, and AI layers.
- ▶ Developed AI-powered products using OpenAI GPT models; applied structured prompt engineering and retrieval patterns for reliable LLM outputs.
- ▶ Designed scalable, normalized PostgreSQL schemas with Prisma ORM; implemented migration strategies and query optimization techniques.
- ▶ Implemented secure authentication systems: JWT-based stateless auth, refresh token rotation, and role-based access control (RBAC).
- ▶ Applied software engineering best practices: component-driven architecture, API versioning, environment-based configuration, and code reviews.
- ▶ Consistently shipped projects end-to-end with focus on performance (Core Web Vitals), maintainability, and exceptional user experience.

ACHIEVEMENTS

- ▶ Shipped and publicly deployed multiple software products with real users—demonstrating ability to take projects from 0 → production.
- ▶ Built 3 distinct AI-integrated applications leveraging LLMs—showcasing practical, hands-on expertise in emerging AI technologies.
- ▶ Designed a financial backend system handling complex transactional logic, reflecting understanding of data integrity and system reliability.
- ▶ Maintained a consistent engineering output across diverse domains: EdTech, FinTech, DevTools, and Collaboration—proving versatility and breadth.

LEADERSHIP & MINDSET

- ▶ Self-directed learner — proactively masters cutting-edge technologies (AI/LLM, Next.js App Router, Prisma) without formal instruction.
- ▶ Product-first thinker — approaches every project by identifying user pain points before writing code; ships features that solve real problems.
- ▶ Builder mindset — turns ideas into live, usable products; strong bias toward execution and iterative improvement.
- ▶ Strong problem-solver — breaks complex engineering challenges into actionable subtasks; comfortable with ambiguity and open-ended scoping.
- ▶ Collaborative communicator — clear written and verbal communication; comfortable working across design, product, and engineering disciplines.
